

WHEN AQUABOT POOL ROVER CLEANS YOUR POOL, ALL YOU DO IS ENJOY SWIMMING AND SAVINGS.

- Just drop your lightweight Aquabot Pool Rover in your pool and push a button. It's that easy.
- Aquabot Pool Rover is "jet-propelled" and systematically cleans the floor and slopes of a 24' diameter pool in less than one hour.
- Aquabot Pool Rover is self-contained with its own internal pump and filtration system, so it vacuums and filters without hoses or your pool's filter!
- It removes everything from large leaves to algae as small as 2 microns with its easy to clean, reusable 19-quart capacity microfilter bag.
- Actually pays for itself by reducing total maintenance bills (chemical, water and energy) by as much as 50%!
- Proven long life and virtually maintenance free, Aquabot Pool Rover will serve you well for many years.
- Aquabot Pool Rover has a guidance system that's easy to set and will clean the floor of any shape aboveground pool.
- Aquabot Pool Rover's extra-wide non-marring wheels allow it to roll over ripples and foot printed vinyl pool bottoms.
- Made in the U.S.A. Supported by the largest national network of robotic service centers and an in-house customer support team.

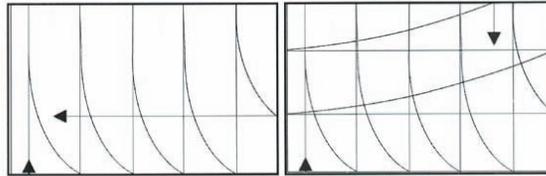

NO MATTER WHAT SHAPE ABOVEGROUND POOL YOU HAVE, THE AQUABOT POOL ROVER IS READY TO CLEAN! JUST DROP IT IN AND PUSH A BUTTON.

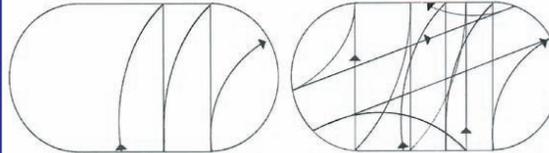

Systematic Round Pool Cleaning Pattern

Systematic Rectangular Cleaning Pattern

Systematic Oval Cleaning Pattern

The Aquabot Pool Rover is shipped to you ready to completely clean all vinyl lined round, rectangular and oval aboveground pool floors of any size.

POOL ROVER
THE ABOVEGROUND
POOL CLEANING
ROBOT

The easiest, fastest, and most efficient way to clean your pool floor.

You bought a swimming pool to have fun—not to give yourself more work. Maybe you find yourself spending time cleaning the pool instead of swimming and enjoying. Or maybe you bought one of those pool cleaners that work off your pool filtration system.

Because your aboveground pool filtration system was only designed to filter your pool water and not to vacuum and clean your pool floor, you may have noticed that the filtration system doesn't do a very good job and requires constant cleaning because of your current cleaner.

Besides, those bulky hoses get tangled; you've got to drag them out of storage, hook them up to the intake valve, and the cleaner tends to get stuck on the ladders, stairs, seams, drains and footprints.

Get yourself a Pool Rover today and enjoy complete, effortless pool cleaning at the touch of a button!

Here's what makes Aquabot Pool Rover the best way to clean your **aboveground** pool floor:

Aquabot Pool Rover is "jet-propelled" by its own internal pump and automatically changes direction! (no drive belts, gears or diaphragms to replace or hoses to untangle)

41' Floating cable keeps out of the Pool Rover's cleaning path.

Made with pride in the U.S.A.

Pool Rover's body is lightweight and durable (only 11 lbs.).

Patented adjustable, directional guidance system ensures systematic cleaning of any aboveground pool.

The internal pump motor pulls debris through large intakes underside of the Pool Rover into reusable 2 micron filter bag capturing everything from large leaves to bacteria and algae.

2" clearance allows Aquabot Pool Rover to easily roll over obstacles like raised drains, "footprints", wrinkles and uneven pool floors.

Large, lightweight non-marring wheels.

Pool Rover is the only aboveground Robotic Cleaner line that is fully (cleaner, floating cable and power supply) ETL listed to UL Standards for safety and reliability.

Pool Rover cleans most pools in less than an hour and has a 2-hour automatic shut-off.
